

Youssef Nizar Ahmad

QA Automation Engineer | Software Engineer (Java, REST Assured, Spring Boot)

Damascus, Syria | +963 991 325 162 | j12705461@gmail.com

[LinkedIn](#) | [GitHub](#)

Professional Summary

Software Engineering student and QA Automation / Software Engineer with hands-on expertise in backend API test automation using **Java 21**, **REST Assured**, and **JUnit 5**, alongside full-stack engineering experience in React.js and Flutter. Experienced in designing scalable test automation frameworks, authoring regression test suites, diagnosing complex technical defects, and managing defect lifecycles through root-cause analysis. Solid foundation in Clean Architecture, OOP, and stateless JWT security, with a proven ability to collaborate across cross-functional Agile teams using Git and automated CI/CD pipelines.

Technical Skills

QA & Test Automation: REST Assured, JUnit 5 (Jupiter), AssertJ, Hamcrest, Postman (API Scripting & Collections), Allure Reporting, Automated Regression Testing, Defect Lifecycle Tracking, Boundary & Edge-Case Testing, Test Data Generation

Programming & Frameworks: Java (21 LTS / 17), Spring Boot 3, Spring Data JPA, Hibernate, JavaScript (ES6+), Dart, Flutter, React.js, HTML5, CSS3

Backend & Security: RESTful API Architecture, JWT Authentication & Authorization, Spring Security, Relational Data Modeling, Clean Architecture, SOLID Principles, OOP

Databases: MySQL, PostgreSQL, SQLite, H2 Database (In-Memory Test Schema), Hive

Tools, CI/CD & Methodologies: Git, GitHub Actions (CI Automation), Maven, IntelliJ IDEA, VS Code, Android Studio, Postman/Newman, Agile/Scrum

Work Experience

Full Stack Development & QA Intern | FutureX (Remote)

May 2026 – August 2026

- Engineered and tested features for multi-platform web and mobile applications, creating interactive, responsive user interfaces with React.js and Flutter.
- Designed and verified RESTful API integrations with relational databases, validating edge cases, status code handling, and state management patterns (Cubit/BLoC) for real-time data flows.
- Diagnosed and resolved critical technical issues (debugging), performed exploratory and regression testing, and elevated application performance and UX/UI stability.
- Actively participated in sprint reviews and code reviews, collaborating within a cross-functional Agile team using Git workflows to enforce release quality standards.

Sales Representative | Bookstore (Part-time)

2025 — 4 months, alongside university studies

- Advised customers and provided tailored product recommendations, enhancing client communication and satisfaction.
- Managed daily sales operations, handled point-of-sale (POS) transactions, and organized product displays under tight timelines.
- Developed active listening, problem-solving, and communication skills, thriving under pressure in a fast-paced environment.

QA & Software Engineering Projects

QA Automation & REST API Testing Suite

Java 21, Spring Boot 3, REST Assured, JUnit 5, Allure

- Architected an end-to-end automated API testing framework in **Java 21** utilizing **JUnit 5 Jupiter**, **REST Assured**, and **AssertJ** for User Management and Authentication services.
- Formulated and automated comprehensive test suites covering positive/negative flows, input boundary validation, HTTP contract compliance (200, 201, 400, 401, 404, 409), and stateless JWT Bearer security.
- Managed a documented QA defect lifecycle (BUG-001 to BUG-005), conducting root-cause analysis, defect reproduction, regression suite automation, and verified closures.
- Implemented dynamic port isolation (`@SpringBootTest(webEnvironment = RANDOM_PORT)`) and randomized idempotent test data generation (`TestDataGenerator`) to eliminate flaky test collisions.
- Integrated automated Continuous Integration (CI) via **GitHub Actions** and **Allure Reporting** dashboards to execute automated regression runs on every pull request.

Full Stack Web Application & API Integration

React.js, Modern JavaScript (ES6+), RESTful APIs

- Built interactive, responsive single-page applications (SPAs) using React.js and modern JavaScript standards, fully integrated with RESTful APIs.
- Designed complete client-side architectures connected to relational backends, handling token-based authentication, form validations, and asynchronous state synchronization.

Cross-Platform Mobile Application Development

Flutter, Dart, Clean Architecture, BLoC

- Developed production-grade Flutter applications following Clean Architecture and BLoC/Cubit for predictable state management.
- Configured offline-first local storage using SQLite and Hive, with automated validation for network transitions and edge cases.

(Full projects and source repositories available via the GitHub profile link above)

Education

B.Sc. in Information Technology Engineering (Software Engineering)

Expected Graduation: 2028

Damascus University

Core Coursework: Software Engineering, Algorithms & Data Structures, Database Systems, Operating Systems, Computer Networks.

Languages

Arabic: Native | **English:** Working Professional Proficiency
