

Youssef Nizar Ahmad

QA Automation Engineer | Software Engineer (Java, REST Assured, Spring Boot)

Damascus, Syria | +963 991 325 162 | j12705461@gmail.com | [LinkedIn](#) | [GitHub](#)

Professional Summary

Software Engineering student and QA Automation / Software Engineer with practical expertise in backend API test automation using **Java 21**, **REST Assured**, and **JUnit 5**, combined with full-stack development skills in React.js and Flutter. Experienced in architecting scalable automation frameworks, authoring regression test suites, diagnosing complex technical defects, and conducting rigorous root-cause analysis. Solid foundation in Clean Architecture, OOP, and stateless JWT security, with demonstrated success collaborating across Agile teams using Git and automated CI/CD pipelines.

Technical Skills

QA & Test Automation: REST Assured, JUnit 5 (Jupiter), AssertJ, Hamcrest, Postman (Scripting & Newman), Allure Reporting, Regression Testing, Defect Tracking, Edge-Case & Boundary Testing, Dynamic Test Data Generation

Languages & Frameworks: Java (21 LTS / 17), Spring Boot 3, Spring Data JPA, Hibernate, JavaScript (ES6+), Dart, Flutter, React.js, HTML5/CSS3

Backend & Architecture: RESTful APIs, JWT Authentication & Authorization, Spring Security, Relational Modeling, Clean Architecture, SOLID, OOP

Databases & Storage: MySQL, PostgreSQL, SQLite, H2 Database (In-Memory Testing), Hive

Tools & Methodologies: Git, GitHub Actions (CI/CD), Maven, IntelliJ IDEA, VS Code, Android Studio, Agile/Scrum

Featured Projects

QA Automation & REST API Testing Suite *Java 21, Spring Boot 3, REST Assured, JUnit 5, Allure*

- Architected an automated backend API testing framework in **Java 21** using **REST Assured**, **JUnit 5**, and **AssertJ** for User Management and stateless JWT Authentication services.
- Automated exhaustive test suites covering positive/negative flows, input boundaries, HTTP status contracts (200, 201, 400, 401, 404, 409), and stateless Bearer security.
- Managed a documented QA defect lifecycle (BUG-001 to BUG-005) with root-cause analysis, defect reproduction, regression suite automation, and verified closures.
- Implemented dynamic port isolation (`@SpringBootTest(RANDOM_PORT)`), randomized idempotent test data generation (`TestDataGenerator`), and CI automation via **GitHub Actions** and **Allure Reports**.

Full Stack Web Application & API Integration *React.js, Modern JavaScript (ES6+), RESTful APIs*

- Built interactive SPAs with React.js and modern JavaScript, integrated with RESTful APIs and relational databases (MySQL/PostgreSQL), implementing token authentication and error boundaries.

Cross-Platform Mobile Application Development *Flutter, Dart, Clean Architecture, BLoC*

- Engineered cross-platform mobile apps following Clean Architecture and BLoC pattern, with offline-first SQLite/Hive caching and rigorous edge-case testing.

Work Experience

Full Stack Development & QA Intern | FutureX (Remote) *May 2026 – August 2026*

- Developed and tested multi-platform features using React.js and Flutter; verified RESTful API integrations, status codes, and BLoC/Cubit state management for real-time data flows.
- Diagnosed and debugged technical defects, conducted exploratory and regression testing, and actively participated in code reviews within an Agile Git workflow.

Sales Representative | Bookstore (Part-time) *2025 — 4 months*

- Delivered customer service, managed POS transactions, and built strong communication, prioritization, and problem-solving skills under tight deadlines.

Education

B.Sc. in Information Technology Engineering (Software Engineering) *Expected: 2028*
Damascus University

Coursework: Software Engineering, Algorithms & Data Structures, Database Systems, Operating Systems, Networks.

Languages

Arabic: Native
English: Working Professional Proficiency
